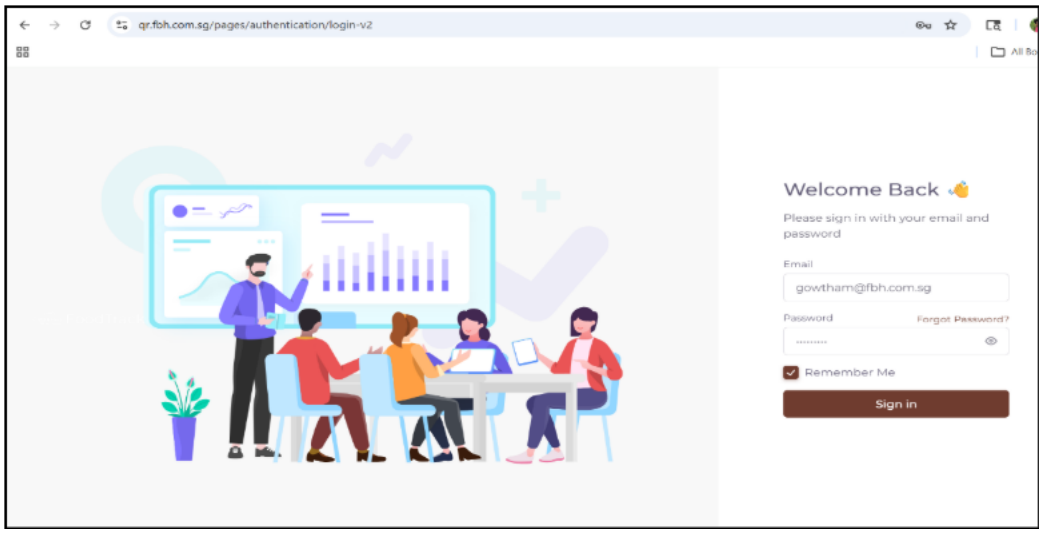
10	**QR Code Scanner** Scan and validate customer QR codes	Section 10
11	**Reports** Generate and export food request reports	Section 11

Section 1: Authentication & Account Management

Login • Forgot Password • Reset Password • Change Password

1.1 Login Screen



The Login Screen is the main entry point into the QRServe / Food Track system. Only authorized users with registered credentials can access the application.

> **Access URL:** https://qr.fbh.com.sg/login

Screen Layout

Left Panel	Right Panel
Visual branding illustration showing analytics, system usage and teamwork. Provides a modern, user-friendly interface experience.	Login form with Email field, masked Password field, Remember Me checkbox, Forgot Password link, and Sign In button.

Login Fields & Components

Field	Description
Email	Enter your registered email address
Password	Enter your password (masked for security)
Remember Me	Check this to stay logged in for future sessions
Forgot Password?	Click this link to reset your password via email
Sign In Button	Submits your credentials for validation

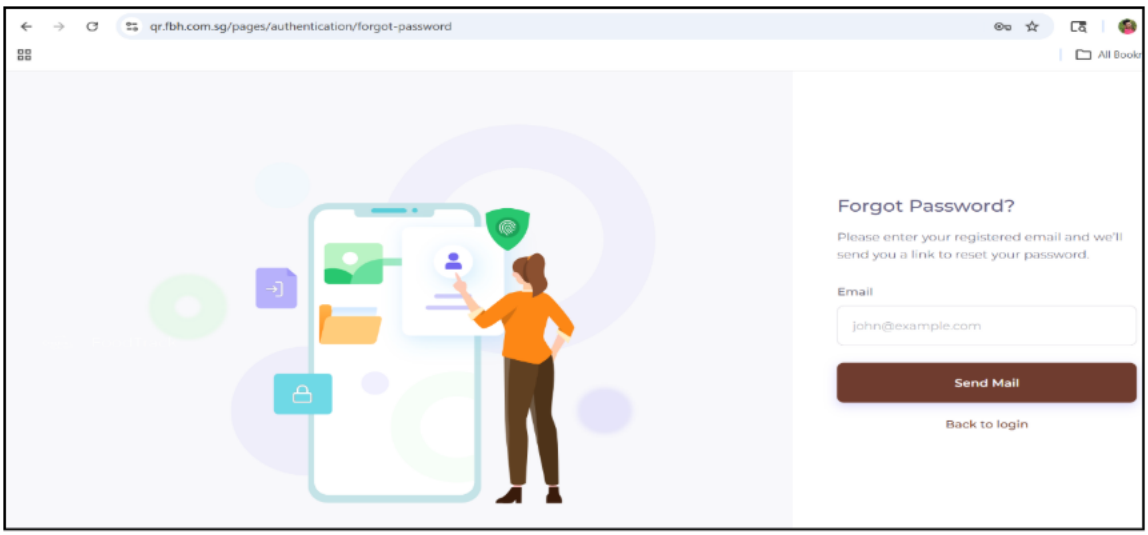
How to Log In — Step by Step

1	Open the QRServe URL in your web browser
2	Enter your registered Email address in the Email field
3	Enter your Password in the Password field
4	Optionally check Remember Me to keep your session active
5	Click the Sign In button
6	If credentials are valid, you will be redirected to the Dashboard
7	If credentials are invalid, an error message will be displayed — verify and try again

✓**Success:** Valid credentials redirect you to the system Dashboard.

✗**Error:** Invalid credentials display an error message. Check your email and password and try again.

1.2 Forgot Password Screen



Use this screen when you cannot remember your account password and need to recover access.

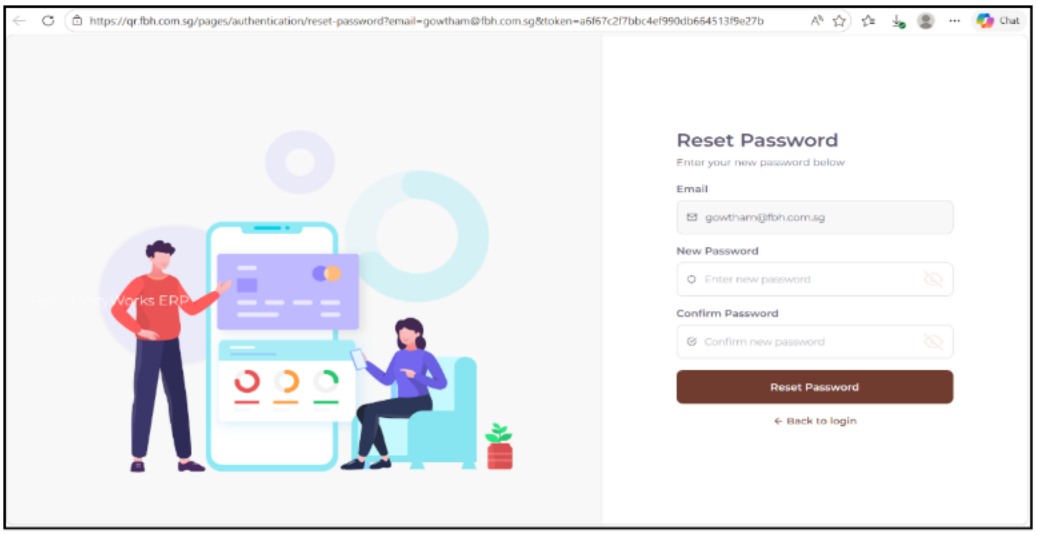
How to Reset via Email — Step by Step

1	Click the Forgot Password? link on the Login Screen
2	The Forgot Password page will open
3	Enter your registered Email address in the input field
4	Click the Send Mail button
5	The system checks if the email exists in the database
6	If found, a password reset link is sent to your email

7	If not found, an error message is displayed
8	Check your email inbox for the reset link
9	Click Back to Login to return to the login page at any time

Note: Check your spam/junk folder if you do not receive the reset email within a few minutes.

1.3 Reset Password Screen



This screen appears when you click the password reset link received in your email. Use it to set a new password for your account.

Reset Password Fields

Field	Description
Email	Your registered email address (read-only, auto-filled)
New Password	Enter your desired new password (masked)
Confirm Password	Re-enter the new password to confirm it matches

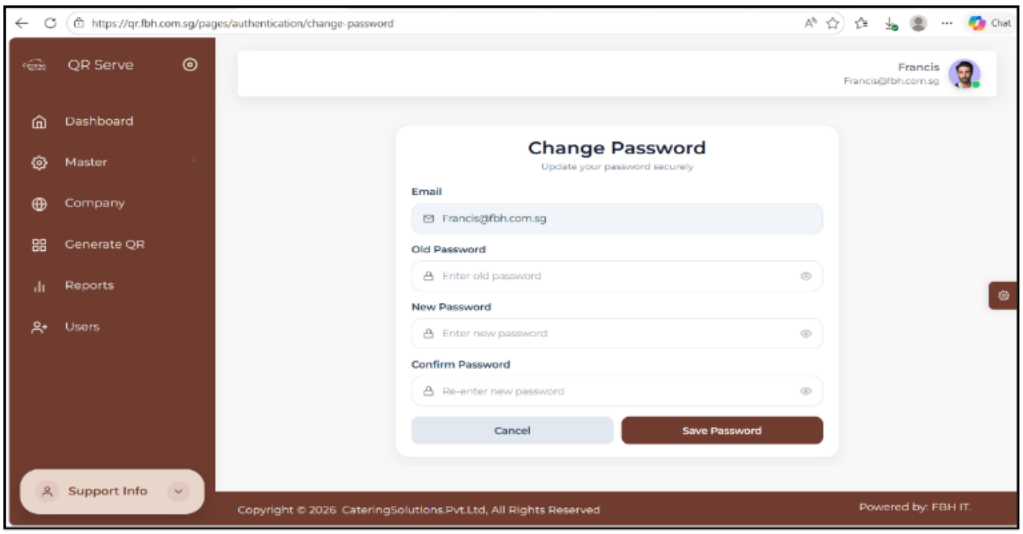
How to Reset Your Password — Step by Step

1	Click the password reset link in your email
2	The Reset Password page will open with your email pre-filled
3	Enter your New Password in the first field
4	Re-enter the same password in the Confirm Password field
5	Click the Reset Password button
6	The system validates the passwords match and the reset token is valid

7	If successful, your password is updated and you are notified
8	Click Back to Login and sign in with your new password

Important: Password reset links expire after a limited time. If the link is expired, repeat the Forgot Password process to get a new link.

1.4 Change Password Screen



This screen allows logged-in users to update their existing password. Unlike Reset Password, this requires you to know your current password.

Change Password Fields

Field	Description
Email	Your registered email address (read-only, auto-filled)
Old Password	Enter your current/existing password for verification
New Password	Enter the new password you want to set (masked)
Confirm Password	Re-enter the new password to confirm it matches

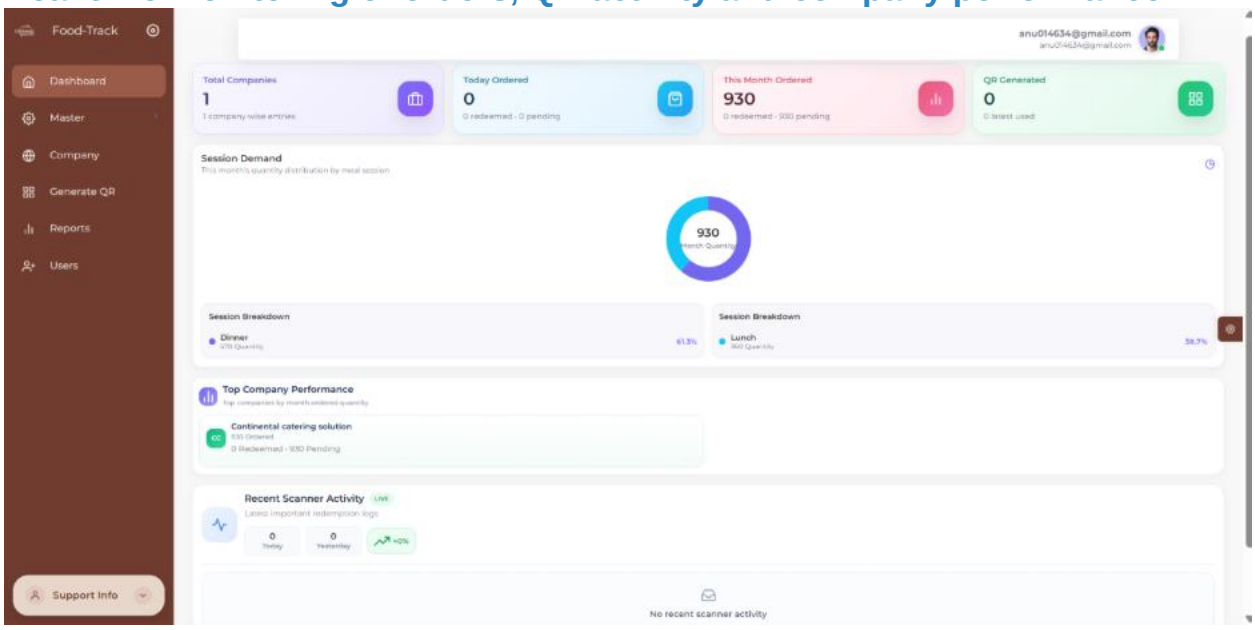
How to Change Your Password — Step by Step

1	Navigate to Change Password from your profile or settings menu
2	Your Email is pre-filled and read-only
3	Enter your current password in the Old Password field
4	Enter your desired new password in the New Password field
5	Re-enter it in the Confirm Password field

6	Click Save Password to apply the changes
7	If all validations pass, your password is updated and you are notified
8	Click Cancel to discard changes and return without saving

 Security Tip: Use a strong password combining uppercase, lowercase, numbers, and special characters.

Dashboard Overview:
Real-time monitoring of orders, QR activity and company performance



KPI Summary Cards

Total Companies	Today Ordered	This Month Ordered	QR Generated
Total registered companies in the system.	Total orders placed today including Redeemed and Pending counts.	Total monthly orders to help track business volume.	Total QR codes generated to monitor QR activity.

Dashboard Features

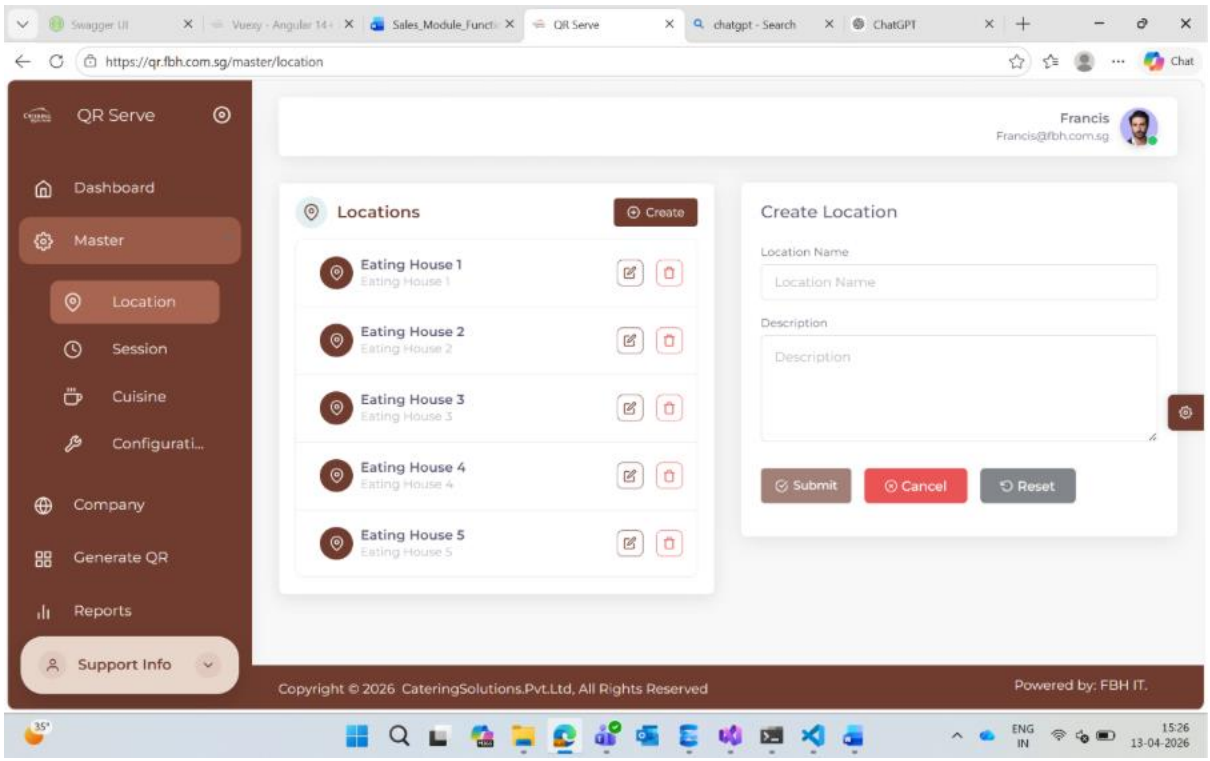
Field	Description
Session Demand	Visual donut chart showing order distribution and session-wise split to identify demand trends.
Session Breakdown	Displays quantity and percentage by session. Supports planning and analysis.
Top Company Performance	Shows highest performing company with total, redeemed, and pending orders.
Recent Scanner Activity	Displays QR scan data for today and yesterday with growth percentage.
Real-Time Updates	Dashboard updates dynamically — data reflects backend changes instantly.

Role-Based Visibility	**Super Admin: Full access | Admin: Company-specific data | Scanner: Limited access.**

Section 2: Location Master

Manage service areas and dining locations

2.1 What is Location Master?



The Location Master screen is used to define and manage different service areas or dining locations within your operation. Examples include Eating House 1, Eating House 2, Cafeteria A, etc.

> **Access:** Menu → Master → Location | URL: https://qr.fbh.com.sg/master/location

Locations are required before:

- Creating sessions
- Generating QR codes
- Placing and organizing orders

2.2 Screen Overview

Left Side — Location List	Right Side — Create / Edit Form
Displays all existing locations. Each entry shows: • Location Name	Form with fields: • Location Name (required)

• Edit button (pencil icon) • Delete button (trash icon)	• Description (optional) • Submit / Cancel buttons

2.3 How to Create a New Location

1	Click the Create button on the Location Master screen
2	Enter a unique Location Name (e.g., Eating House 1) — this field is required
3	Optionally enter a Description for clarity
4	Click Submit to save the new location
5	The new location will immediately appear in the list on the left side

2.4 How to Edit a Location

1	Find the location you want to edit in the list
2	Click the Edit (pencil) icon next to that location
3	The location details will load in the right-side form
4	Update the Location Name or Description as needed
5	Click Submit to save your changes

2.5 How to Delete a Location

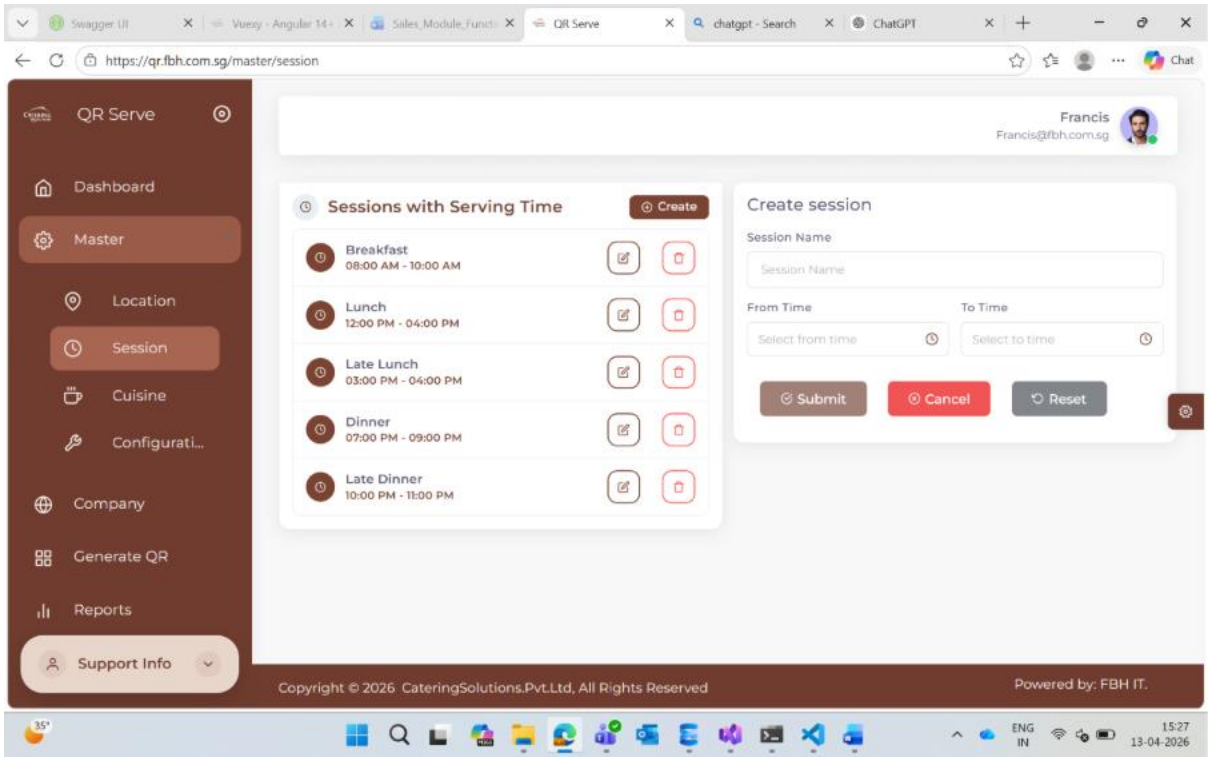
1	Find the location you want to delete in the list
2	Click the Delete (trash) icon next to that location
3	Confirm the deletion when prompted

Warning: Deleting a location may affect any linked QR codes, sessions, or orders. Ensure the location is no longer in use before deleting.

Section 3: Session Master

Define meal sessions and time slots

3.1 What is Session Master?



Session Master is used to define different serving time slots — such as Breakfast, Lunch, and Dinner — that control when menu items are available and how orders are organized.

> **Access:** Menu → Master → Session | URL: https://qr.fbh.com.sg/master/session

3.2 Session Form Fields

Field	Description
Session Name	Name of the meal session (e.g., Breakfast, Lunch, Dinner)
From Time	The start time of the session (e.g., 08:00 AM)
To Time	The end time of the session — must be later than From Time

3.3 How to Create a Session

1	Click the Create button on the Session Master screen
2	Enter the Session Name (e.g., Breakfast)

3	Set the From Time using the time picker (e.g., 08:00 AM)
4	Set the To Time (e.g., 10:00 AM) — must be after From Time
5	Click Submit to save the session
6	The new session will appear in the list with the time range displayed

 Example Session Schedule: Breakfast: 08:00 AM – 10:00 AM | Lunch: 12:00 PM – 02:00 PM | Dinner: 06:00 PM – 08:00 PM

 Important Rule: From Time must always be earlier than To Time. Avoid overlapping session times to prevent order conflicts.

3.4 How to Edit / Delete a Session

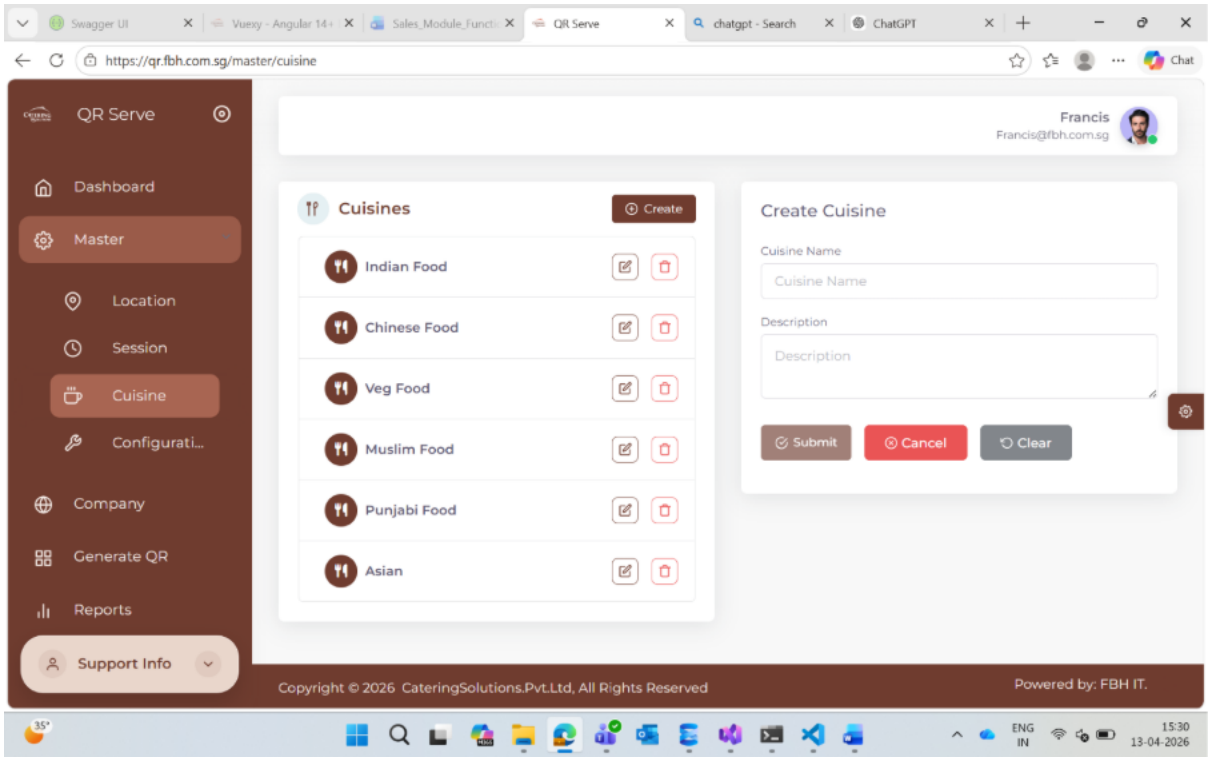
Editing: Click the Edit (pencil) icon → Update the fields → Click Submit.

Deleting: Click the Delete (trash) icon → Confirm the action.

Section 4: Cuisine Master

Categorize food types and menu items

4.1 What is Cuisine Master?



The Cuisine Master screen is used to create and manage different food categories or cuisine types such as Indian Food, Chinese Food, Vegetarian, Western, etc. These categories help organize menu items and improve the ordering experience.

> **Access:** Menu → Master → Cuisine | URL: https://qr.fbh.com.sg/master/cuisine

4.2 Cuisine Form Fields

Field	Description
Cuisine Name	Name of the food category (required) — e.g., Indian Food, Chinese Food
Description	Optional description to clarify the cuisine type

4.3 How to Create, Edit, or Delete a Cuisine

Creating: Click Create → Enter Cuisine Name and optional Description → Click Submit.

Editing: Click the Edit (pencil) icon on a cuisine → Update fields → Click Submit.

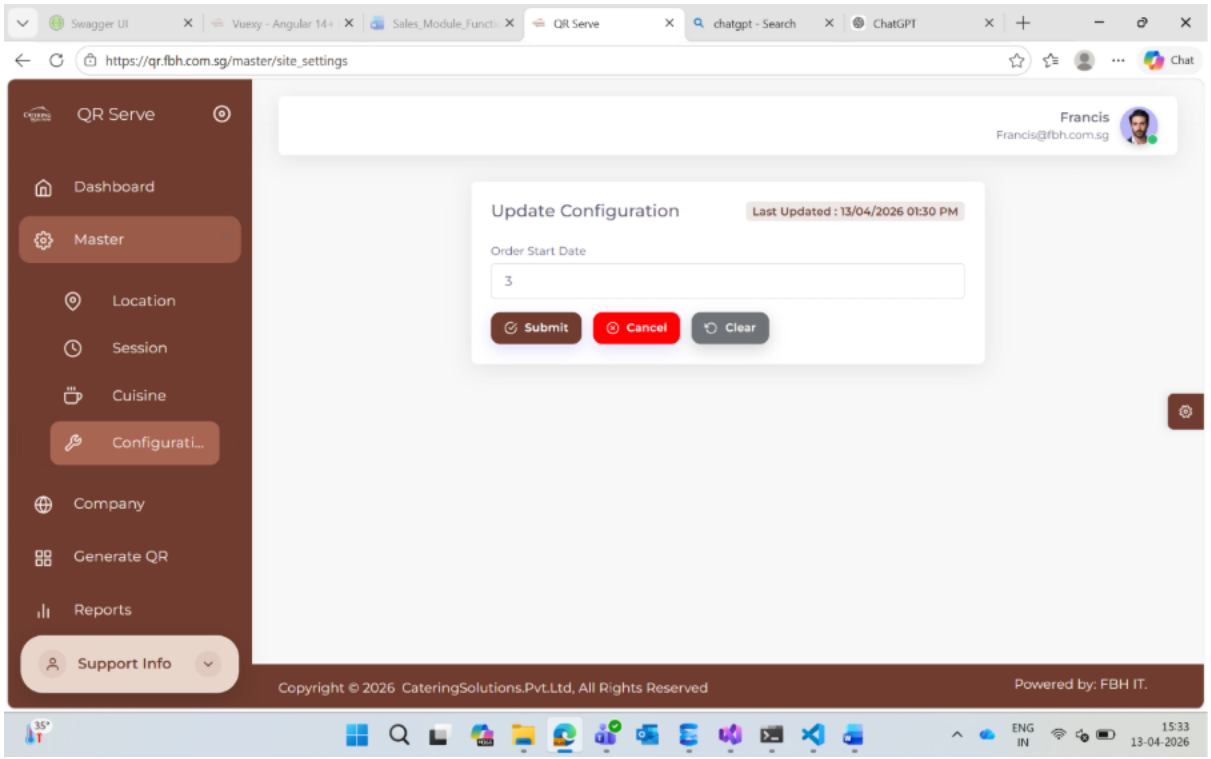
Deleting: Click the Delete (trash) icon → Confirm the action.

> **Note:** Deleting a cuisine may affect linked menu items. Verify no active items are using this cuisine before deleting.

Section 5: Configuration Settings

System-level order rules and advance booking limits

5.1 What is Configuration?



The Configuration screen controls system-wide rules for order creation — specifically, how many days in advance an order can be placed. This setting affects all users globally.

> **Access:** Menu → Master → Configuration | URL: https://qr.fbh.com.sg/master/site_settings

5.2 Order Start Date — How It Works

The Order Start Date field defines the minimum number of days ahead a user must wait before placing an order.

Configuration Value	Earliest Allowed Order Date	Example (Today = 13-Apr)
0	Today onwards	13-Apr-2026
1	Tomorrow onwards	14-Apr-2026
3	3 days from today	16-Apr-2026
5	5 days from today	18-Apr-2026

5.3 How to Update Configuration

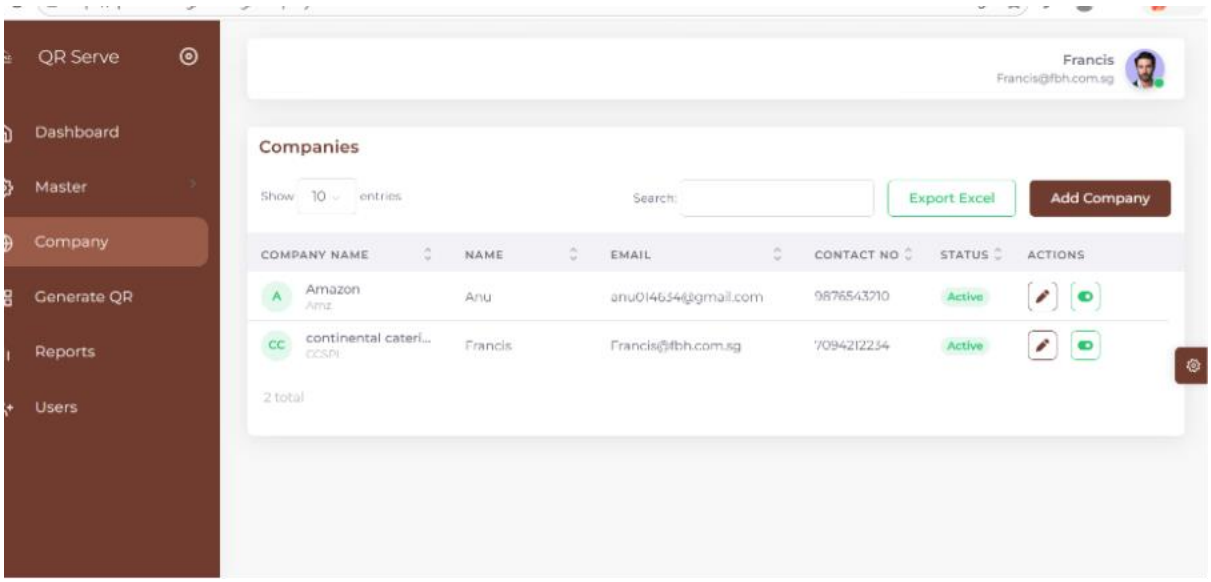
1	Navigate to Master → Configuration
2	Enter the desired numeric value in the Order Start Date field
3	Click Submit to save — changes apply immediately for all users
4	Click Cancel to discard changes without saving

 Best Practice: For catering operations, a value of 2–5 days is recommended to allow proper planning and preparation time.

Section 6: Company Management

Create and manage company accounts

6.1 Company List Screen



The Company screen allows administrators to view, search, and manage all company accounts registered in the QRServe system. Only users with the Admin role can access this screen.

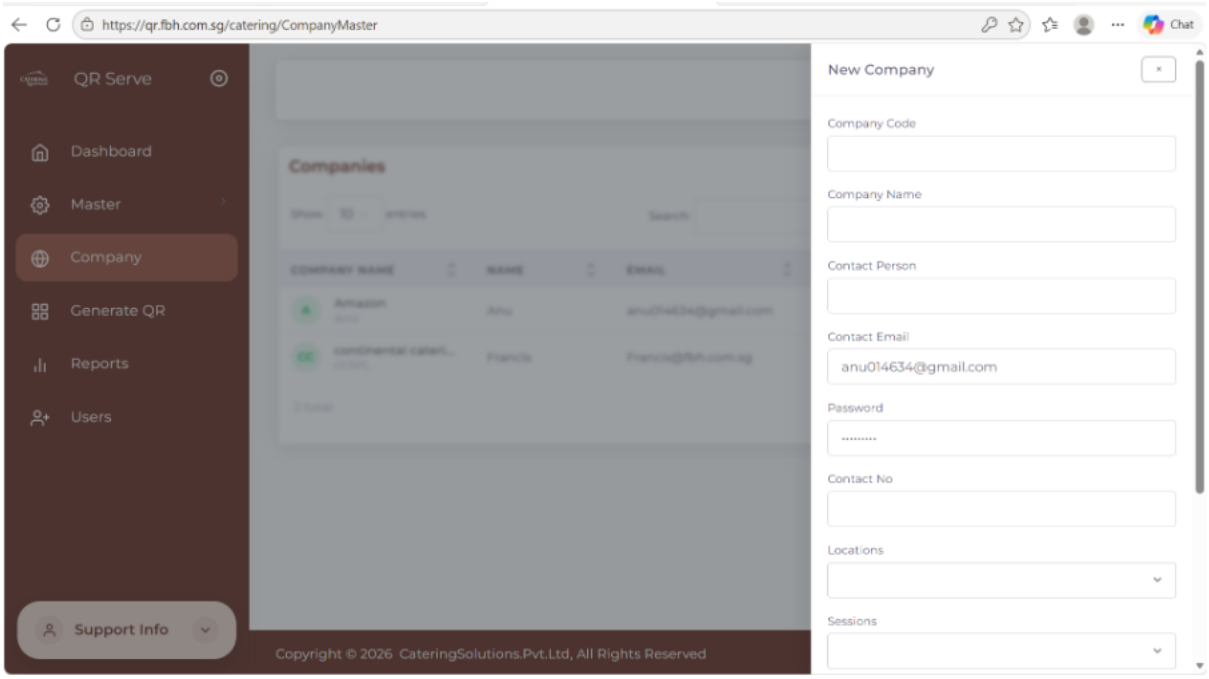
Available Actions on the Company List

- Search for a company by name or code
- Export company data
- Add a new company using the Add Company button
- Edit an existing company's details
- Activate or deactivate a company using the status toggle

6.2 How to Add a New Company

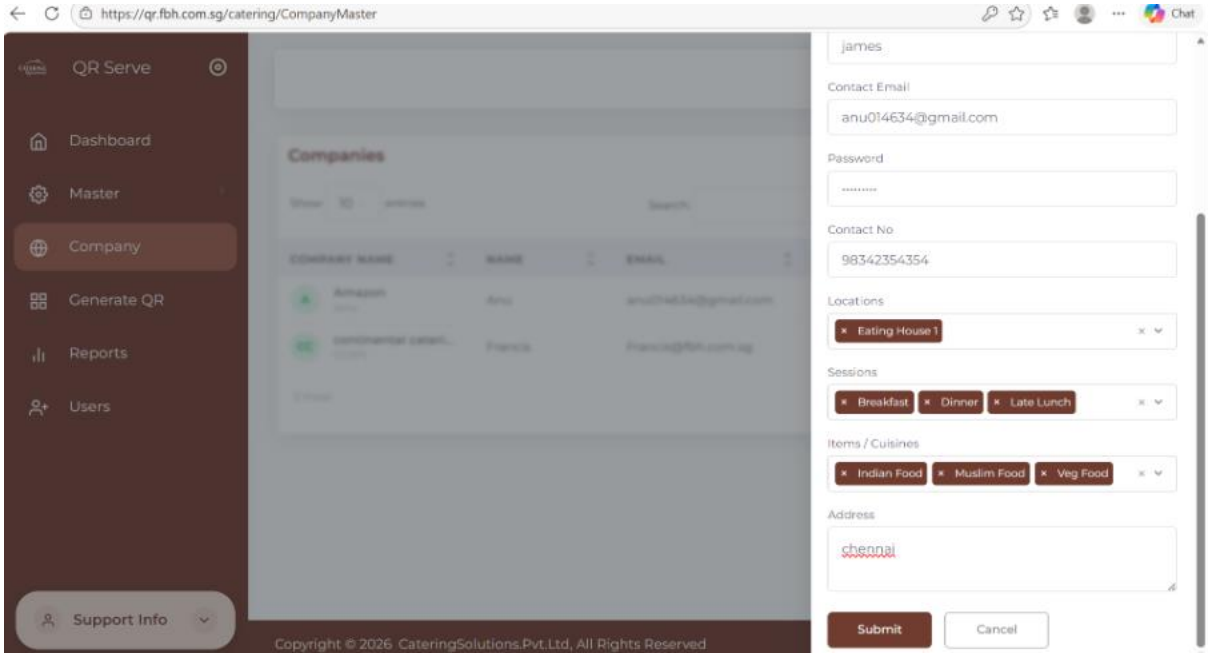
1	Click the Add Company button on the Company List screen
2	A side panel form will slide open on the right side
3	Fill in all required fields (see field reference below)
4	Select the appropriate Locations from the available options
5	Select the required Sessions for the company
6	Click Save to create the company
7	The company appears in the Company List
8	The Set Session Timings form will automatically open next

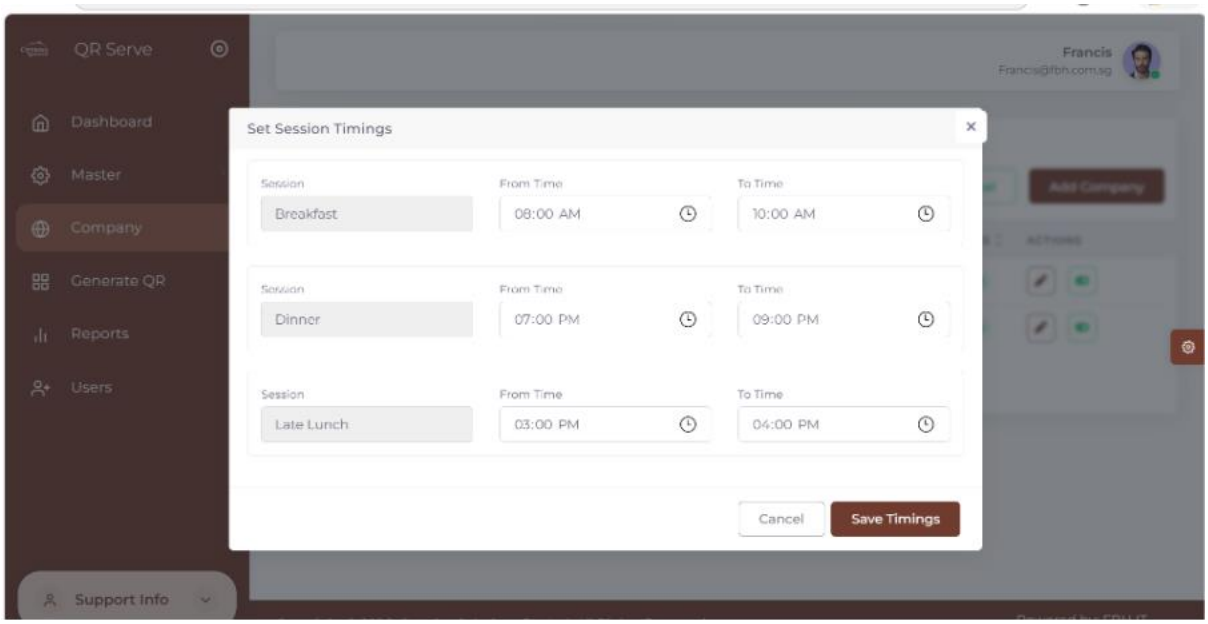
Add Company Form Fields



Field	Description
Company Name	Full name of the company (required, must be unique)
Company Code	Short unique identifier code for the company (no duplicates)
Email	Company's email address used for login and QR delivery (must be valid)
Password	Initial login password — share securely with the company user
Locations	Select one or more dining locations assigned to this company
Sessions	Select meal sessions (Breakfast, Lunch, Dinner) for this company

6.3 Set Session Timings





After clicking Save on the Add Company form, the Set Session Timings screen opens automatically. This screen defines the specific meal times for each session assigned to the company.

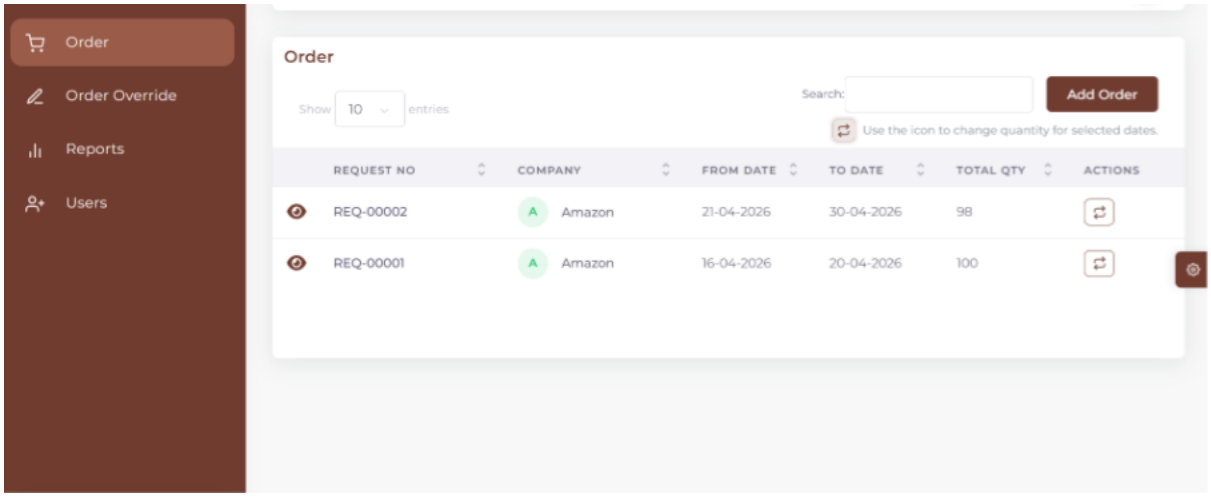
Field	Description
Session Name	Read-only — shows the session type (e.g., Breakfast, Lunch, Dinner)
From Time	Start time of the session for this company
To Time	End time — must be later than From Time

 Important: Session timings are critical for QR code validation. The scanner will only accept QR codes during the assigned session time window.

Section 7: Order Management

Create, view, and track food orders

7.1 Order List Screen

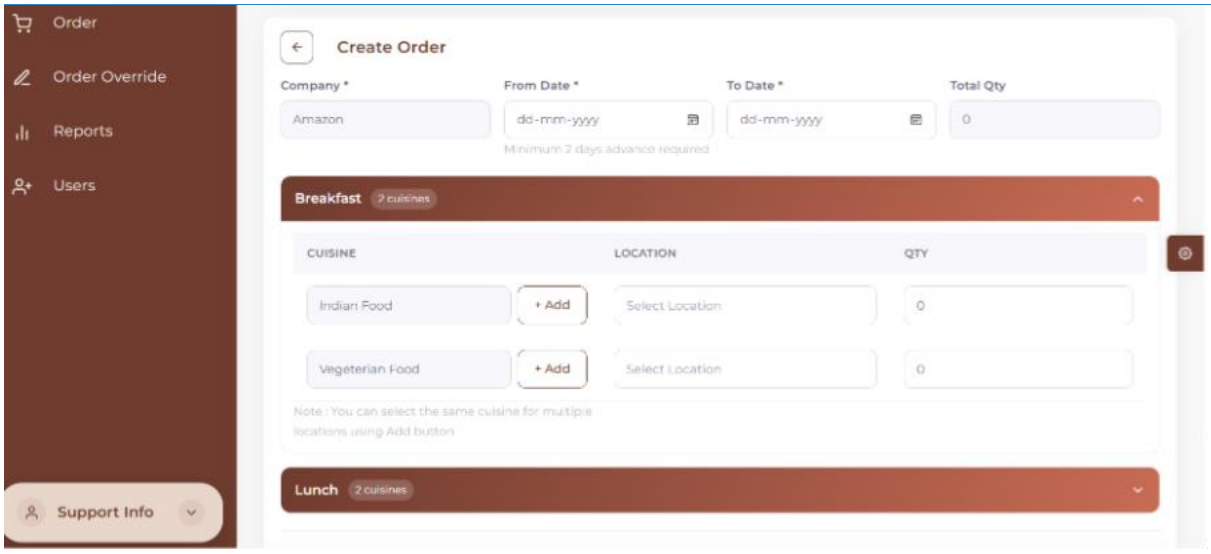


The Order module is used to create and manage food requests for companies. Orders are organized by date range, session (Breakfast, Lunch, Dinner), cuisine, and location-wise quantity.

Order List Columns

Field	Description
Request No	Unique identifier for each order (e.g., REQ-00001)
Company	The company the order belongs to
From Date	The order start date
To Date	The order end date
Total Quantity	Total number of meals ordered across all sessions
Actions	View details or initiate an Override

7.2 How to Create a New Order



1	Click the Add Order button on the Order List screen
2	The order creation form opens
3	Enter the From Date — must be at least today + configured advance days
4	The To Date is auto-limited to the end of the selected month
5	The Company field is auto-filled based on your logged-in account
6	Expand the session section (e.g., Breakfast or Lunch)
7	Select a Location from the dropdown
8	Enter the Quantity for that location
9	Click + Add to add more locations for the same session
10	Repeat for additional sessions if needed
11	Review the auto-calculated Total Quantity at the bottom
12	Click Save to create the order, or Cancel to discard

Order Validation Rules

Rule	Requirement
From Date	Must be today + configured advance days or later
To Date	Must be equal to or after From Date
Quantity	At least one row with a quantity greater than zero is required
Duplicate Locations	Same location cannot be added twice in the same session
Overlapping Orders	Orders for the same company and date range cannot overlap

7.3 How to View Order Details

1	In the Order List, find the order you want to inspect
2	Click the View (eye) icon in the Actions column
3	A detailed popup will open showing:
4	Session-wise data breakdown (Breakfast, Lunch, Dinner)
5	Cuisine type, Location, and Quantity for each entry
6	Close the popup when done reviewing

Section 8: Override Orders

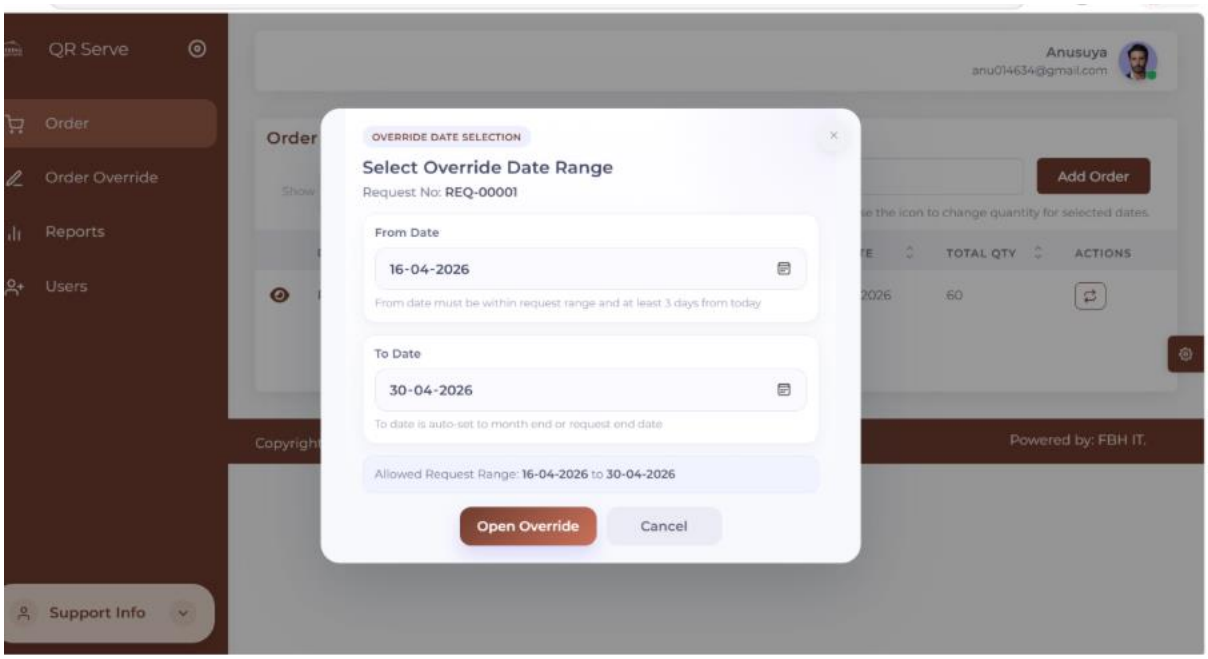
Modify existing orders for specific date ranges

8.1 What is an Override?

An Override allows you to modify the quantity of an already-saved order for a specific period. This is useful when actual requirements differ from the originally planned quantities — without changing the full original request.

8.2 Override Date Selection

1	In the Order List, click the Override icon in the Actions column for the desired order
2	The Override Date Selection popup opens
3	The Request No is displayed for confirmation
4	Enter the From Date — must be within the original order range and satisfy the advance days rule
5	The To Date is auto-calculated (month-end or original request end date, whichever is earlier)
6	Review the Allowed Request Range shown on screen
7	Click Open Override to proceed to the Override Entry screen
8	Click Cancel to close without creating an override



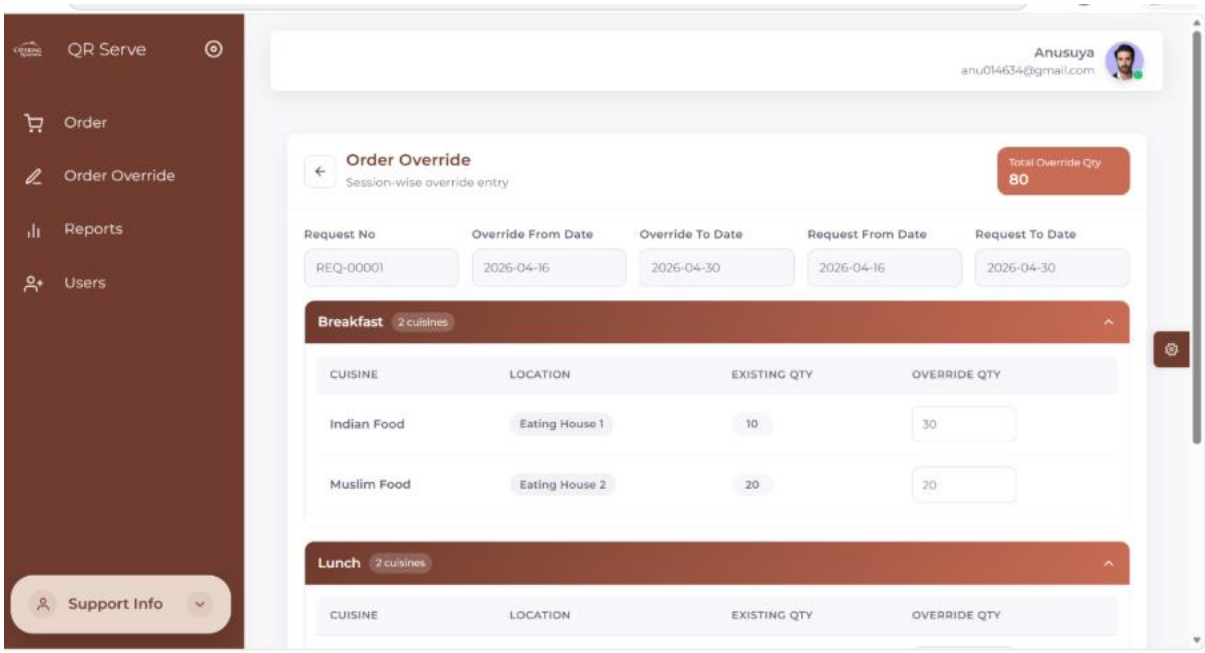
Override Date Selection Fields

Field	Description

Request No	Displays the original order reference number (read-only)
From Date	Start date of the override — must be within allowed range
To Date	Auto-set to month-end or request end date (whichever is earlier)
Allowed Request Range	Shows the valid override window (e.g., 16-04-2026 to 30-04-2026)

8.3 Override Entry Screen

After clicking Open Override, the Override Entry Screen displays the original order quantities for each session and lets you enter modified quantities.



Override Header Information

Field	Description
Request No	The original order being overridden
Override From Date	Start date of the override period
Override To Date	End date (auto-calculated)
Request From/To Date	Original order date range for reference
Total Override Quantity	Auto-calculated sum of all override quantities (read-only)

Entering Override Quantities

For each session (Breakfast, Lunch, Dinner), two columns are shown:

- Existing Quantity — the original order quantity (read-only, for reference only)
- Override Quantity — pre-filled with the existing value; edit this to set the new quantity

- 
- 
1	Review the Existing Quantity values shown for each session and location
2	Edit the Override Quantity fields as needed
3	The Total Override Quantity updates automatically as you type
4	Click Save Override to submit the changes
5	The system saves the override and updates Reports, QR Generation, and the Dashboard

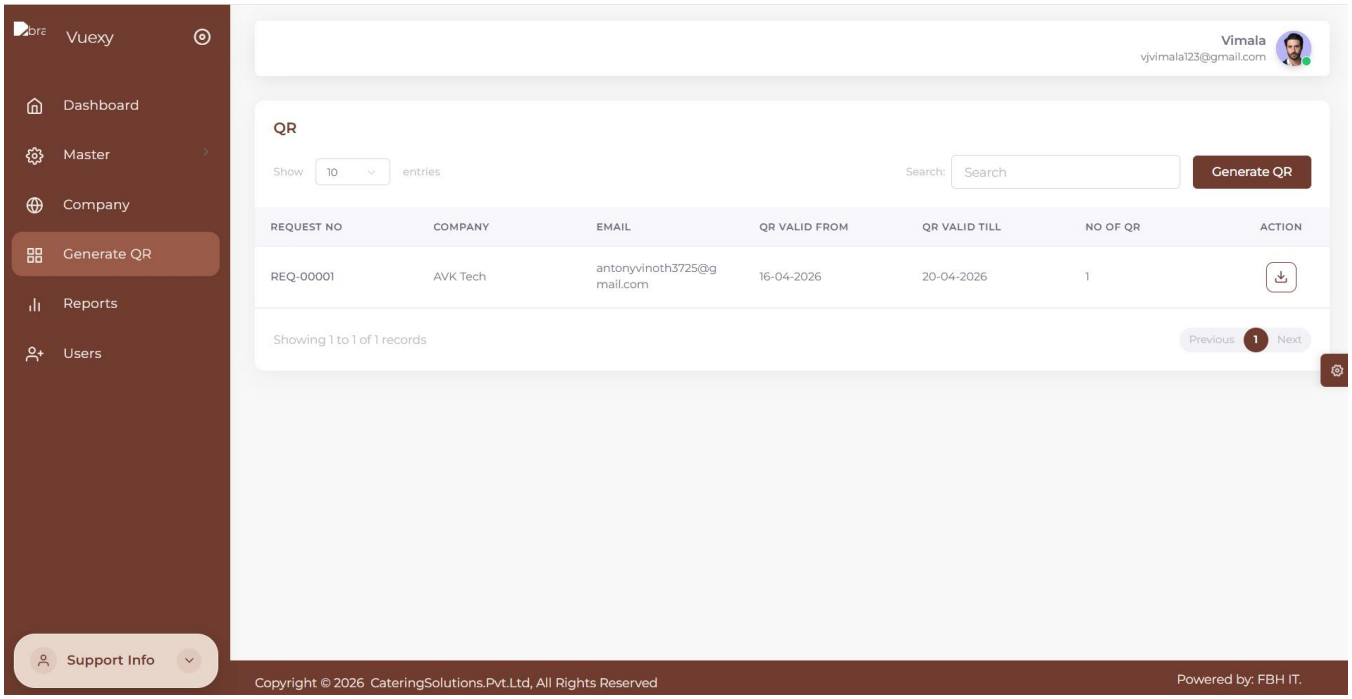
✅**After Saving:** The override is linked to the original request. Reports and QR codes will reflect the overridden quantities for the selected date range.

Section 9: QR Code Management

Generate, send, and download QR codes

9.1 QR Screen Overview

The QR Screen displays all generated QR code records and allows users to generate new codes, search existing records, and download QR images.

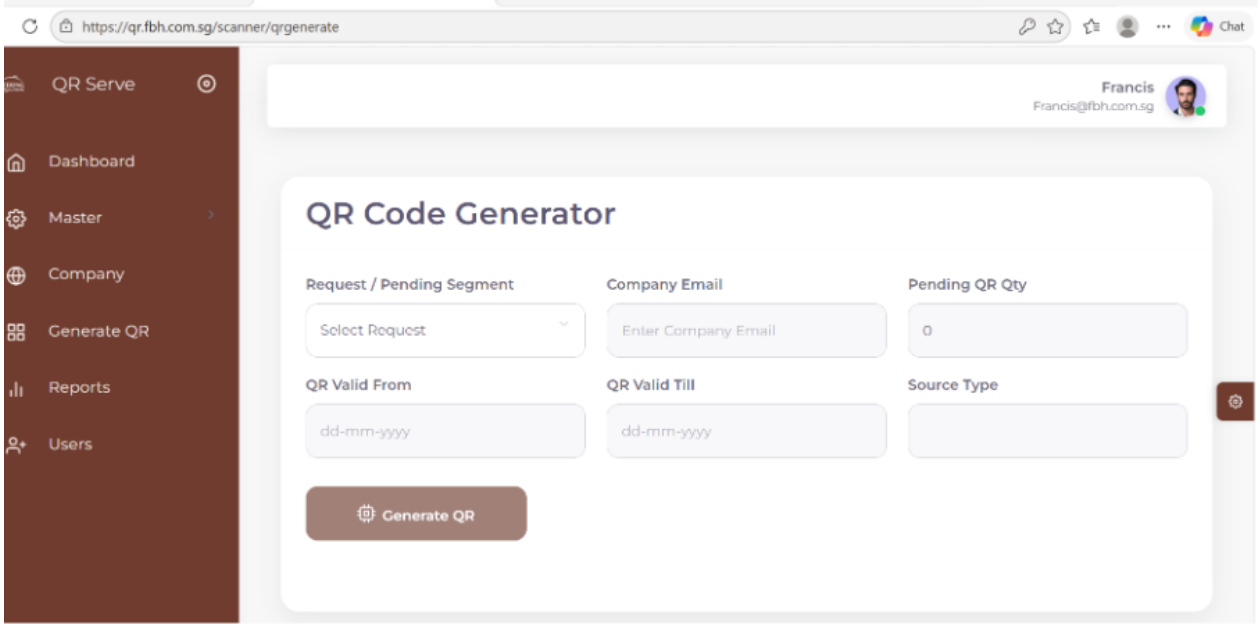


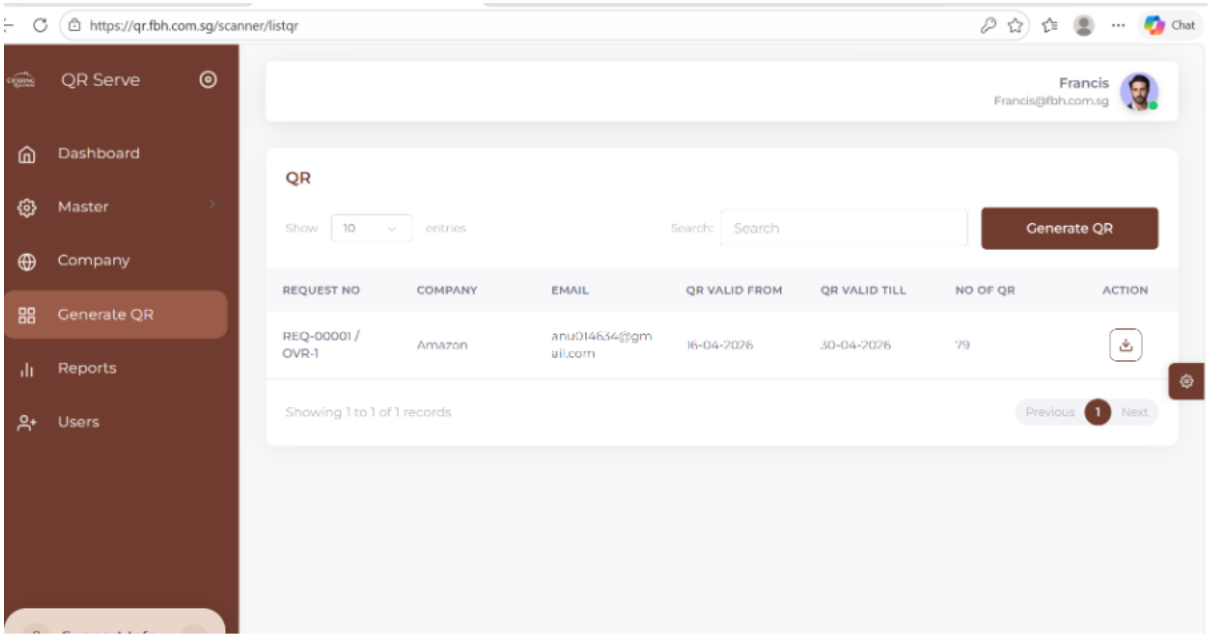
QR List Columns

Field	Description
Request No / Override No	Reference to the original order or override
Company Name	The company the QR codes belong to
Email	Company email used for automatic QR delivery
QR Valid From	Start date of QR code validity
QR Valid To	End date of QR code validity
Number of QR Codes	Total QR images generated for this record
Download Icon	Click to download QR images locally

How to Generate QR Codes

1	Click the Generate QR button at the top of the QR screen
2	A new screen opens for QR generation
3	Select the Request or Override you want to generate QR codes for
4	The system fetches the associated details (quantity, date range, etc.)
5	Review the displayed information to confirm correctness
6	Click Generate to create the QR codes
7	The QR codes are saved and appear in the QR list
8	The system automatically emails the QR images to the company's registered email address





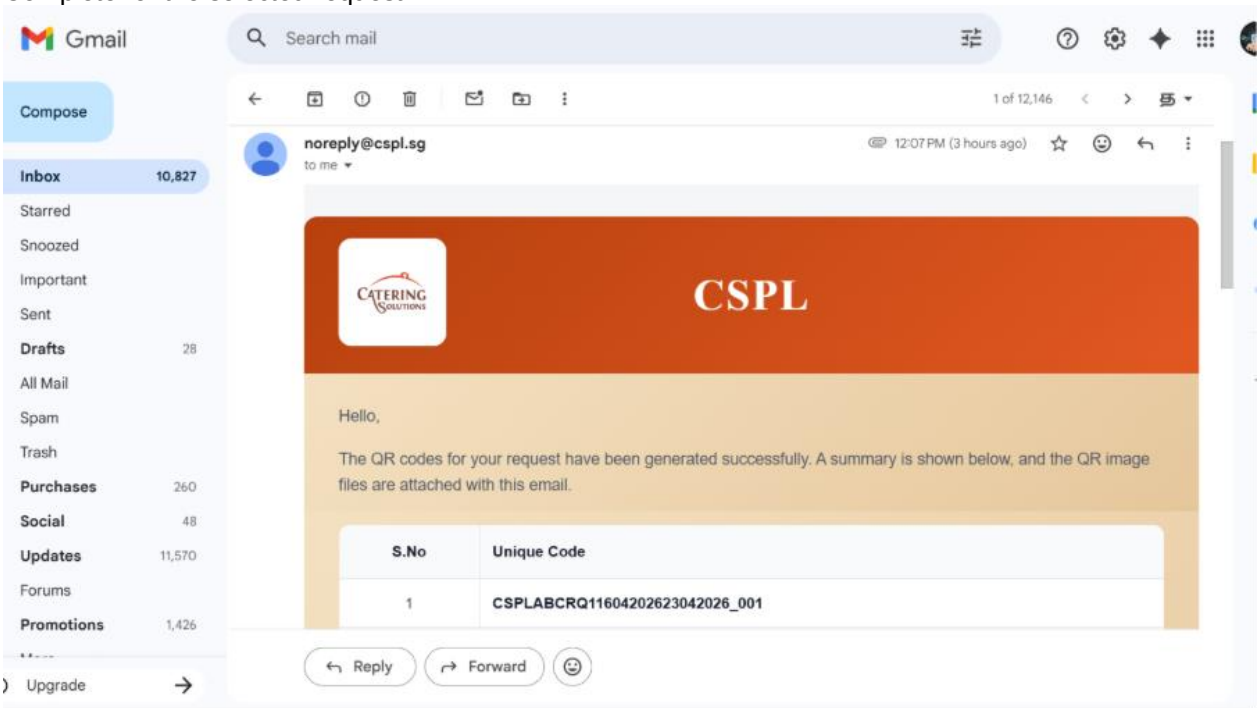
Automatic Email: QR images are automatically sent to the company's registered email after generation — no manual sending required.

Duplicate Prevention: Already-generated QR records may be restricted to prevent duplicate QR codes for the same order.

1	Find the QR record in the QR list
2	Click the Download icon in the Actions column
3	The QR images will be downloaded to your local device
4	Use the downloaded images for printing or distribution

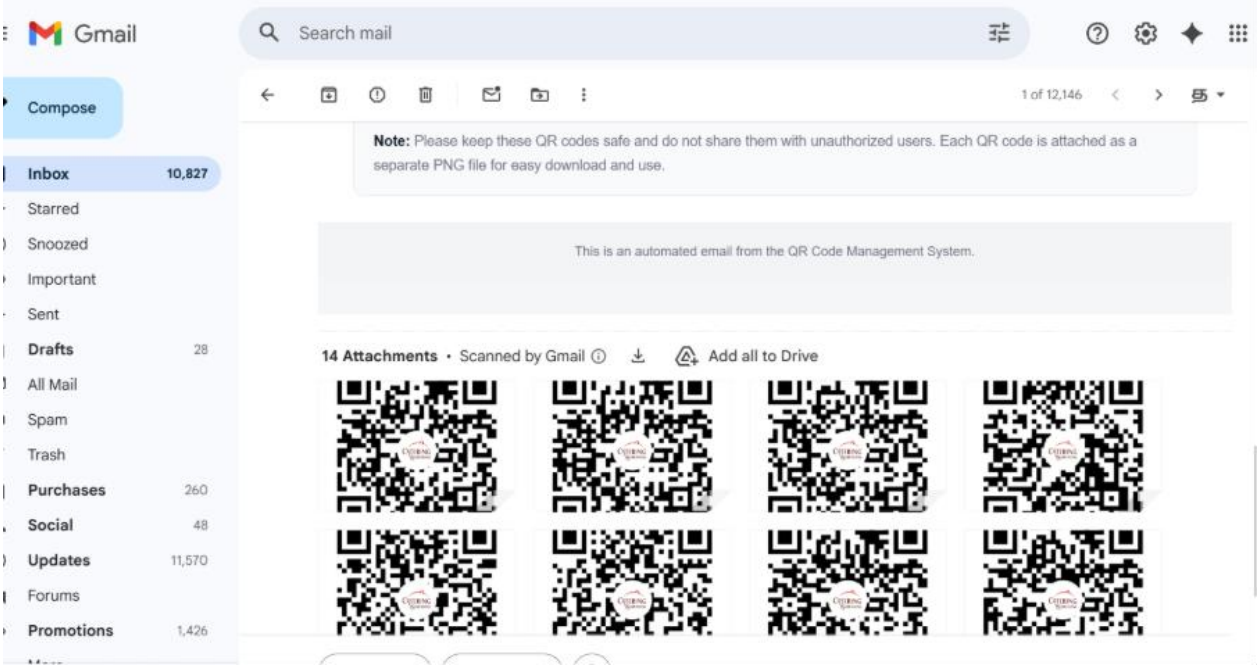
Email Screen

The QR code is automatically sent to the company's registered email address when QR generation is Complete for the selected request.



Field	Description
S.No	Displays the serial Number of the QR-Code
Unique Code	Displays the Uique Code of each QR.

📌 Role-Based Visibility: Super Admin sees all users across all organizations. Admin sees only users belonging to their respective company.



9.3 Downloading QR Codes

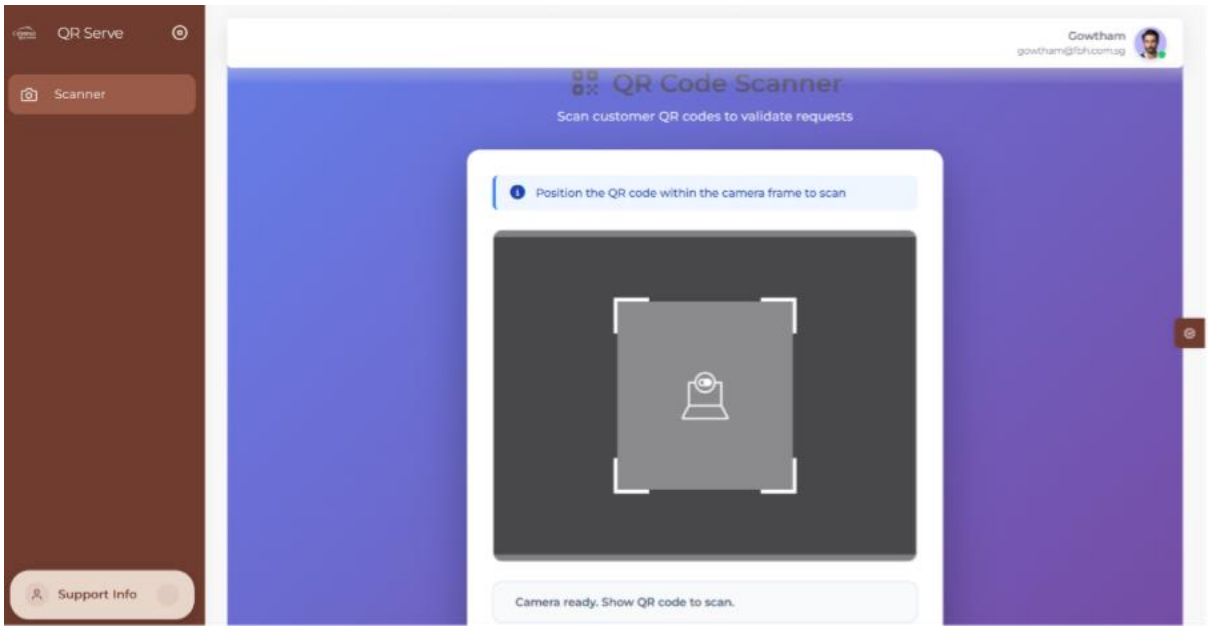
1	Find the QR record in the QR list
2	Click the Download icon in the Actions column
3	The QR images will be downloaded to your local device
4	Use the downloaded images for printing or distribution

Section 10: QR Code Scanner

Scan and validate customer QR codes at the point of service

10.1 What is the QR Scanner?

The QR Scanner is used by staff at food service counters to scan and validate customer QR codes. It verifies that the code is genuine, matches the current session, and has not already been used — allowing food to be issued.



10.2 How to Use the QR Scanner

1	Open the Scanner screen from the navigation menu
2	Allow camera access when prompted by the browser
3	Wait for the status message: 'Camera ready. Show QR code to scan.'
4	Ask the customer to present their QR code
5	Hold the QR code in front of the camera within the scanning frame
6	Keep the QR code steady — the system scans automatically
7	Wait for the validation result to appear on screen
8	Issue food if the result is valid; show the error message if invalid

10.3 Scanner Validation Results

✅ Valid QR Code	❌ Invalid QR Code
• QR code is authentic • Matches current session • Within valid date and time • Food can be issued	• Expired QR code • Wrong session or time slot • QR code already used • Do not issue food

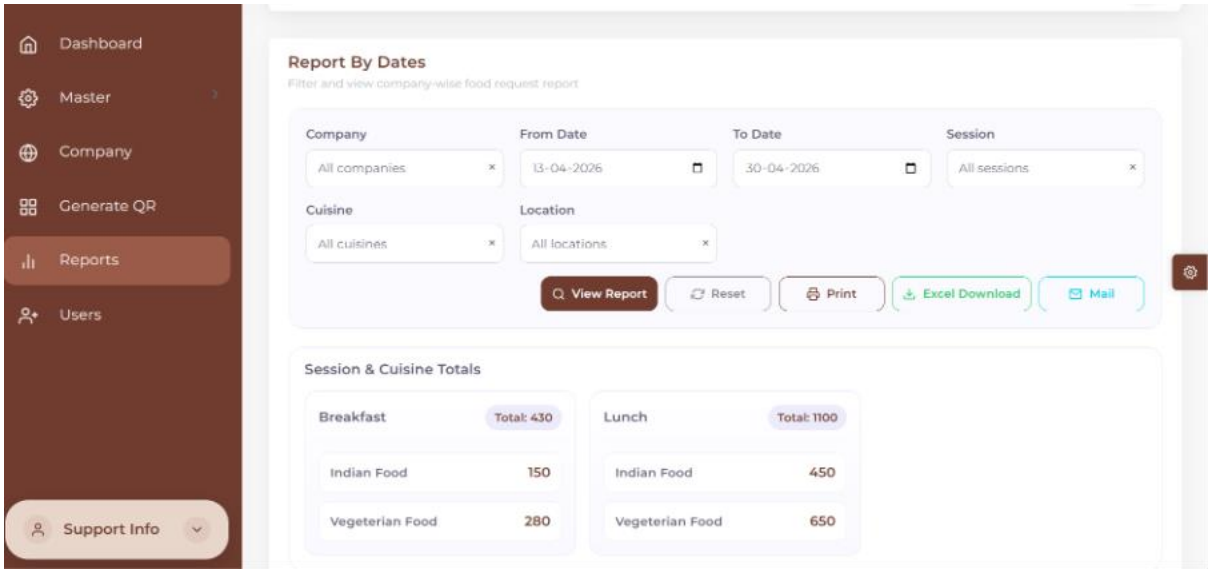
 Scanning Tips: Ensure good lighting, hold the QR code steady within the frame, and avoid shadows over the code for best results.

Section 11: Reports

Generate and export food request reports

11.1 Report Screen Overview

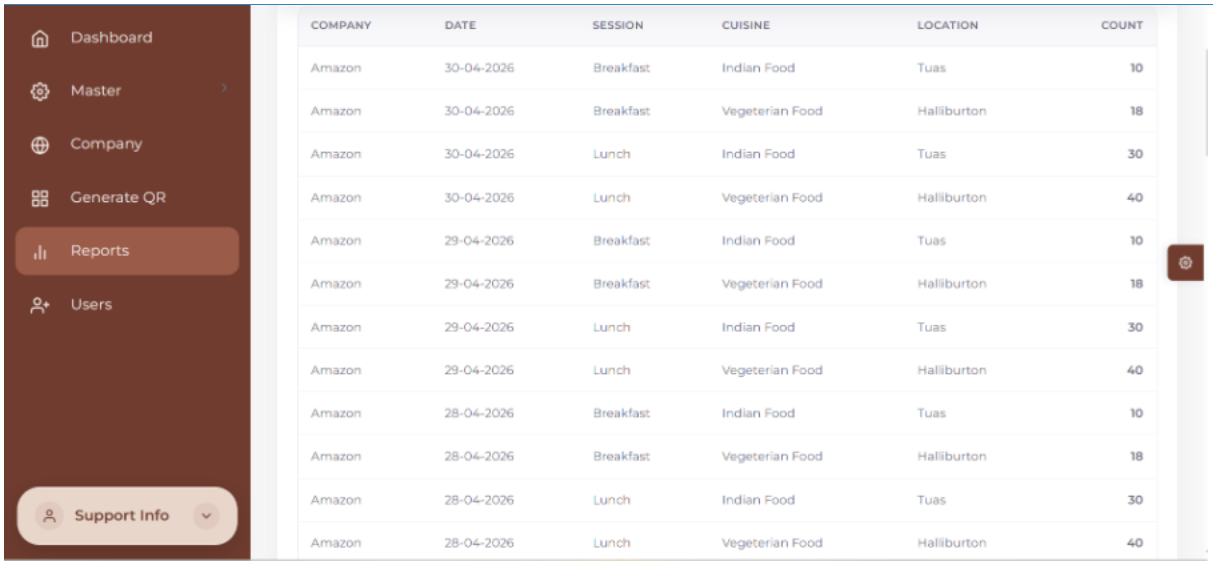
The Reports module allows administrators to view, filter, and export company-wise food request data. Reports can be filtered by date range, session, cuisine, and location for detailed analysis.



11.2 Available Report Filters

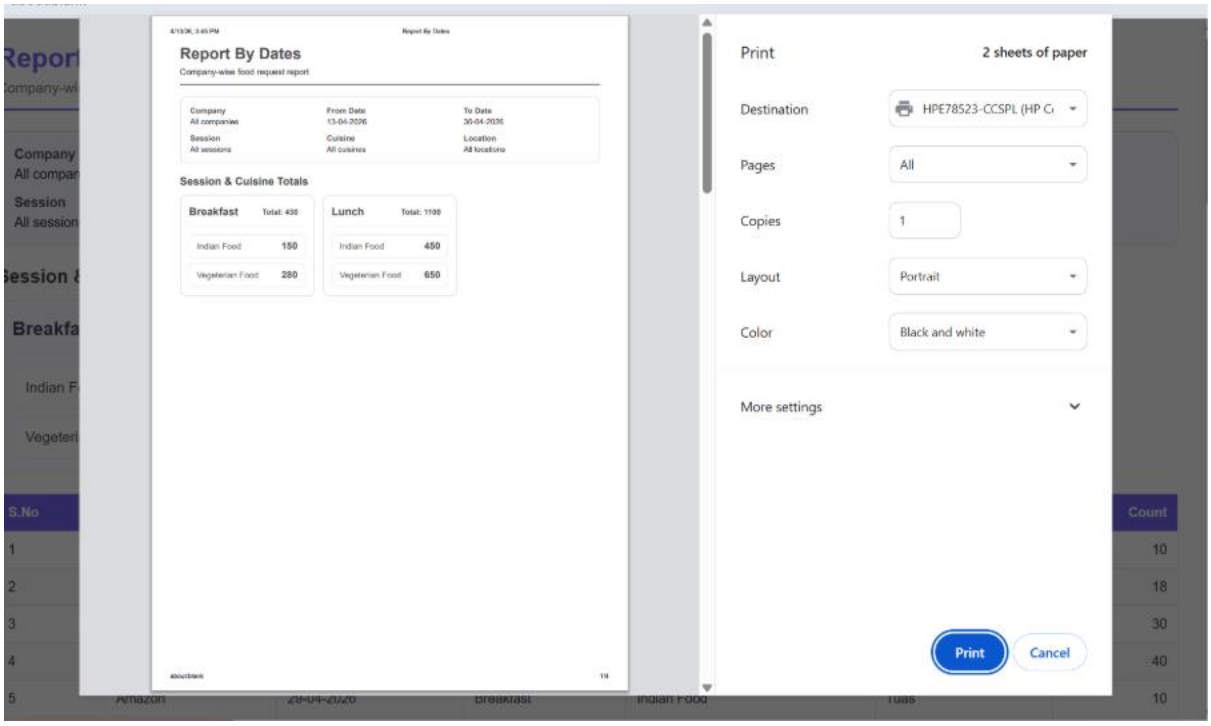
Field	Description
Company	Select a specific company or All Companies for a combined view
From Date	Start date of the reporting period
To Date	End date of the reporting period
Session	Filter by meal session (Breakfast, Lunch, Dinner, or All)
Cuisine	Filter by food category or view all cuisines
Location	Filter by a specific dining location or all locations

11.3 Report Actions



Button	Action
View Report	Loads filtered data into the report view based on selected criteria
Reset	Clears all selected filters and resets the form to default state
Print	Opens a printable version of the current report in the browser
Excel Download	Downloads the filtered report data as a .xlsx Excel file
Mail	Sends the Excel report to the company's registered email address

Print:



Excel Download :

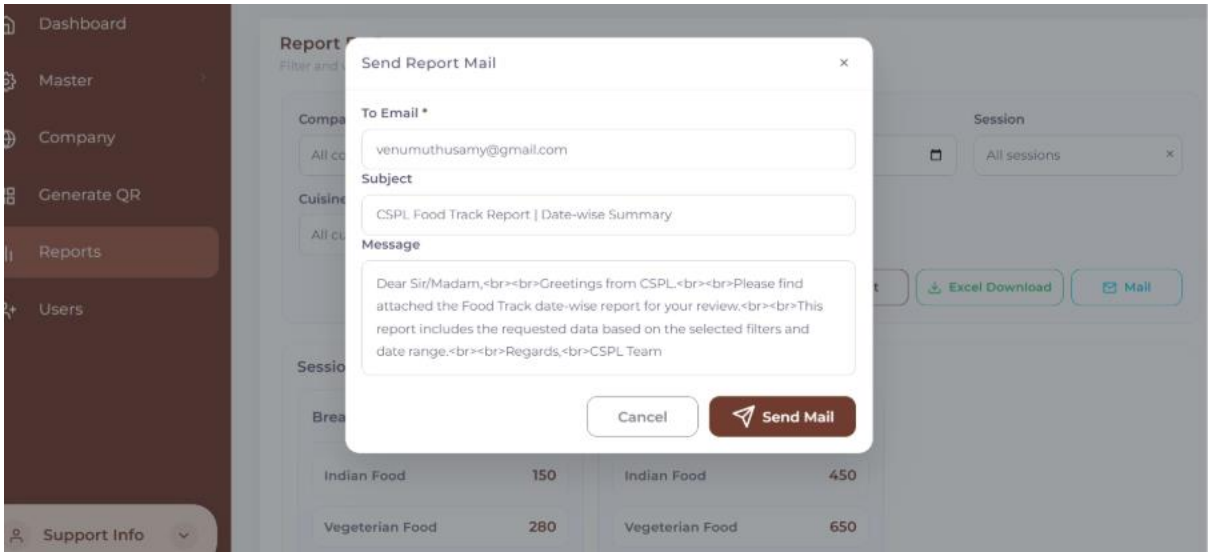
Mail :

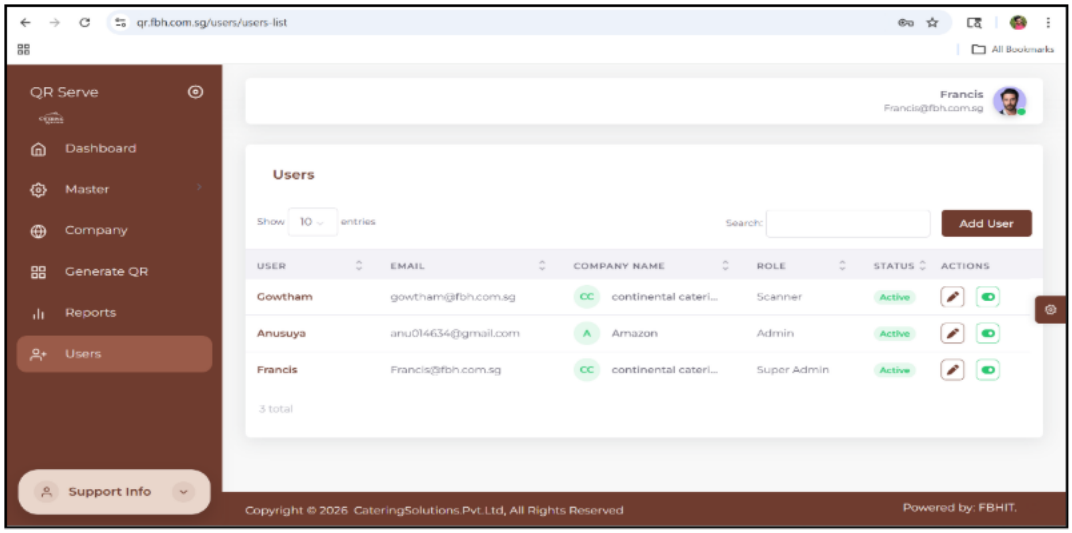


11.4 How to Generate a Report

1	Navigate to the Reports screen from the navigation menu
2	Select the Company (or choose All to view all companies)
3	Set the From Date and To Date for the reporting period
4	Optionally filter by Session, Cuisine, or Location
5	Click View Report to load the filtered data
6	Review the report data displayed on screen
7	Click Print to print the report, or Excel Download to save a spreadsheet

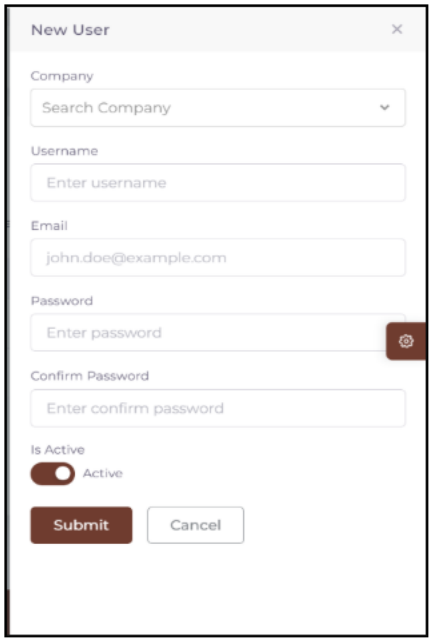
8	Click Mail to automatically send the report to the company email
9	Click Reset to clear all filters and start a new report

User Screen :



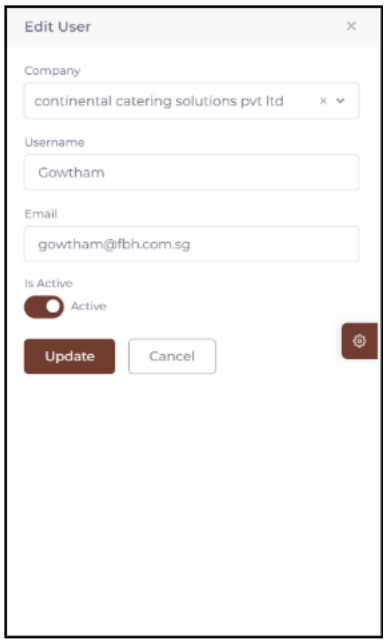
Section	Details
Purpose	Allows administrators to view and manage system users
User List Display	Displays users in a tabular format
Columns	User – Username Email – Registered email Company Name – Associated organization Role – (Super Admin / Admin / Scanner) Status – Active / Inactive Actions – Edit, Activate/Deactivate
Role-Based Visibility	Super Admin – Can view all users across organizations Admin – Can view only users from their company

Create User Screen :



Section	Details
Purpose	Used to create new users
Fields	Company – Dropdown selection Username – Input field Email – Input field Password – Mandatory Confirm Password – Must match password Status – Active/Inactive toggle
Validation Rules	All fields are validated Password & Confirm Password must match
Role-Based Company Access	Super Admin – Can select all companies Admin – Only their company is auto-bound
Actions	Submit – Saves user after validation Cancel – Exit without saving

Edit User Screen :



Section	Details
Purpose	Used to update existing user details
Fields	Company – Dropdown Username – Editable Email – Displayed Status – Active/Inactive toggle
Password Handling	Password fields are not shown (handled via Change Password module)
Role-Based Company Access	Super Admin – Can modify all companies Admin – Restricted to own company
Actions	Update – Saves changes to database Cancel – Exit without saving
